Objet : liquid natural gas Saguenay

My sentiment for a gas transmission from Alberta to Quebec via a northern route is favorable.

I feel the gas transmission ends in Lac St.Jean with a joint venture Hydro Quebec- Alberta gas conversion to Hydrogen,

(both sources)

Both entities need to work together to develop as clean as possible a new Hydrogen infrastructure.

and develop the North,

No tankers for export, focus developing the Canadian Economy without ship tankers for

Export,

There is more to gain by working together, and building newer, cleaner, sources of energy.

Hydrogen and nuclear are the future in my opinion.

Thank you
