Appendix 3: List of Recycling Sorting Centres by Region	30
Appendix 4: List of current GLPGs	32
Appendix 5: List of Rights of Supervision Under the RMMPs by Region.....	33

Overview

As part of the mandate on the *Site Inventory and Final Waste Management*, entrusted to the Bureau d'audiences publiques sur l'environnement (BAPE) by the Minister of the Environment and the Fight against Climate Change, Mr. Benoit Charette, RECYC-QUÉBEC seeks to participate in the work and reflections by sharing its expertise, knowledge, and data on the subject.

This document thus offers an overview of the current status of residual materials in Québec, mainly in terms of their elimination.

The Assessment of Residual Materials Management in Québec, a flagship document prepared by RECYC-QUÉBEC, helps follow and measure Québec's performance in this area. The annual declarations of elimination sites, which are mandatory under existing regulations, serve as primary input regarding the elimination situation. The other data presented are based primarily on voluntary declarations from recovery, sorting, processing, and recycling facilities in Québec.

Quantities of Materials Eliminated

The total quantities of residual materials eliminated in Québec (excluding sludge) have increased in recent years, posting an increase of just over 9% between 2015 and 2019. The most significant increase is in the quantities received in engineered landfills, especially for the 2018-2019 period. However, over the same period, the materials eliminated in the construction or demolition waste landfills have decreased by more than 50%.

In terms of sludge eliminated, the amount of municipal sludge landfilled decreased from 2015 to 2018 but increased significantly in 2019.

Including sludge, the total amount of residual materials disposed of in 2019 therefore amounts to 6,139,000 tonnes. This is an increase of 9.1% over the 5,627,000 tonnes eliminated in 2015.

Quantity Eliminated Per Capita

Regarding the quantity of materials eliminated per capita, the main indicator of recent action plans stemming from the Québec Residual Materials Management Policy, the most recent data show that 722 kg of residual materials were eliminated per capita in 2019. This is a significant increase compared to previous years, since such a high per capita elimination rate had not been observed since 2011. For 2023, the goal is to lower this amount to 525 kg per capita or less.

The Use of Residual Materials in Capping or for Other Uses in Landfills

A total of 2,659,000 tonnes of materials were used for capping or other purposes in Québec landfills in 2019. This represents a 20 % increase since 2015, but an increase of more than 80% since 2010, when the quantities used for recovery or other uses were the lowest since the Regulation respecting the landfilling and incineration of residual materials came into effect in 2009.

It should be noted that more than half of the materials used for capping or other purposes are composed of contaminated soils, followed by scrap metal shredding residues and construction, renovation, and demolition (CRD) residues such as fine residues, shingles, road material, etc.

The increase in the amount of waste used for capping or other uses in landfills results in a significant cover-to-burial ratio of 50% in 2019, which means that for every tonne of material buried, 500 kg of material is used for capping or other uses in landfills.

CRD Waste Disposed of and Used for Capping or Other Uses

In terms of CRD waste disposed of and used for capping or other purposes, an 88% increase in reported quantities was recorded in construction or demolition waste landfills, engineered landfills and trench landfills between 2015 and 2019. In fact, from 507,000 tonnes in 2015, the quantities of CRDs eliminated increased to 1,063,000 tonnes in 2019. This increase is due in part to changes in reporting methods for elimination sites over the years, but also reflects the current importance of CRD residues that are sent for elimination. However, the quantities of CRD residues used for capping or other purposes have continuously decreased from 2016 onwards. This decrease can be explained by various issues experienced by the engineered landfills associated with receiving fine CRD tailings from CRD waste sorting centres as cover material. As a result, the engineered landfills have significantly reduced the use of these residues for this purpose.

However, in recent years, significant quantities of CRD waste, which would normally have been sent to landfill or for capping in the absence of viable markets, have been overlooked in the results presented. Several illegal storage or end-of-life management sites for these materials are in operation, and the exact quantities sent there remain highly difficult to estimate.

Composition of Eliminated Materials

Over the past few years, several characterization studies have been carried out throughout Québec in order to determine the composition of residual materials sent for elimination. In 2011, RECYC-QUÉBEC conducted a first province-wide disposal characterization study (at the entrance of elimination sites) specifically targeting eliminated materials from the municipal, industrial, commercial, and institutional (ICI) or CRD sectors. A new study has been conducted for the period 2019-2020 and it provides an overview of the composition of materials eliminated for the year 2019, but also to compare the results with those already obtained for the year 2011.

In general, there are three key findings. Firstly, organic matter has decreased significantly between 2011 and 2019, both in terms of total tonnage eliminated and as a proportion of total residual materials eliminated. In 2011, organic materials represented 41% of the total eliminated, while in 2019, this proportion was 30% of the total. On the other hand, there has been a significant increase in CRD residues eliminated. This percentage increases further if we add the rejected materials from sorting centres for CRD residues sent for elimination in 2019, which were not the subject of this study. Finally, there are significant increases in the quantities eliminated for textiles as well as for household hazardous waste (HHW). For textiles, the quantity eliminated almost doubled between 2011 and 2019, while the quantities of HHW eliminated more than doubled during this period.

Ultimately, the general observation that we make regarding the most recent data is that many materials that can be reused, recycled, and reclaimed are still currently eliminated in Québec. Therefore, efforts must not only be increased in order to follow their evolution, but above all, to support the various stakeholders in the reduction and sound and responsible management of their residual materials.

1. Framework for the Elimination and Reclamation of Residual Materials

About RECYC-QUÉBEC

RECYC-QUÉBEC was created in 1990 by the Gouvernement du Québec. It is under the authority of the Minister of the Environment and the Fight against Climate Change and conducts its activities in accordance with its incorporating Act, the Act respecting the Société québécoise de récupération et de recyclage (CQLR., c. S-22.01) and the Act respecting the governance of state-owned enterprises (CQLR., c. G-1.02).

RECYC-QUÉBEC's mission is to help Québec reduce, reuse, recycle and reclaim residual materials in a perspective of circular economy and the fight against climate change and its vision is to become a key partner in a waste-free Québec.

RECYC-QUÉBEC stands out in particular for its ability to mobilize and coordinate stakeholders in the field. Furthermore, the Corporation aims to be the reference in prevention and responsible management of residual materials for any concern or need of citizens, industrial, commercial, and institutional (ICI) organizations, municipalities, the construction, renovation, and demolition (CRD) sector, industry associations as well as ministries and organizations.

Since March 23, 2018, when the new Environment Quality Act (EQA) (CQLR, c. Q-2) came into force, RECYC-QUÉBEC has been given increased responsibilities and a broader mandate that fully recognizes and promotes its expertise. Concretely, its various fields of intervention include:

- supporting stakeholders in the waste value chain
- conducting, financing, and promoting research and development work
- mobilizing stakeholders around common and complementary interests in a perspective of circular economy, economic development, and greenhouse gas (GHG) reduction
- changing Québecers' behaviours by informing, sensitizing, and educating them to do the right thing, particularly with the "Ça va où?" mobile application
- assisting municipal organizations and businesses in the prevention and optimization of their waste management
- coordinating the work of the interdepartmental group on the circular economy and implementing various initiatives and partnerships in this area
- administering any public deposit system and the integrated scrap tire management program
- overseeing any waste management system, including extended producer responsibility programs, and ensuring regulatory compliance.

continuing its role of promoting and encouraging best practices in terms of sound and responsible waste management, RECYC-QUÉBEC manages two recognition programs. The first one, ICI on recycle +, aims to honour industrial, commercial, and institutional organizations (ICI) that are proactive and committed to improving their performance, while the second one, the recognition program for construction, renovation, and demolition (CRD) waste sorting centres, aims to identify facilities that obtain good results in sorting and recycling residual materials.

Moreover, among its main responsibilities is also the mandate to develop all plans and programs resulting from the Québec Residual Materials Management Policy, in addition to being the municipalities' one-stop shop for all matters related to the development of their Residual Materials Management Plans (RMMP) and the implementation of the actions set out in these plans, with a view to improving their performance.

Ultimately, RECYC-QUÉBEC's role is complementary to that of the Ministry of the Environment and the Fight Against Climate Change (MELCC). The Corporation is thus responsible for all operational aspects that affect its business segment, while the Ministère is responsible for the development and revision of legislation, policies, and regulations, in addition to carrying out environmental monitoring and control activities.

2019-2024 Québec Residual Materials Management Policy Action Plan

As previously mentioned, RECYC-QUÉBEC is now responsible for the development and implementation of the action plan resulting from the Québec Residual Materials Management Policy, which is sustainable. The actions provided for in the 2019-2024 Action Plan are all aligned with the Policy's main principle, namely, to create a waste-free society that seeks to maximize added value through sound management of its residual materials, and they are aimed at achieving its fundamental objective, which is that the only residual material disposed of in Québec be the final waste.

The Policy also aims to respond to the three major issues of residual materials management: putting an end to the waste of resources, contributing to the achievement of the objectives of the Climate Change Action Plan and those of the Québec Energy Strategy, as well as making all stakeholders involved in residual materials management accountable.

Accordingly, the Action Plan proposes 23 actions grouped under five major measures:

1. Modernization of recyclable materials management systems
2. Reduction of plastics and single-use products
3. Reclamation of organic matter
4. Development of the various recovery channels and other structuring actions
5. Assistance to isolated communities.

The implementation of the Action Plan is accompanied by investments of more than \$100 million over five years, as set out in the Gouvernement du Québec's 2019-2020 budget. Additional sums have also been allocated for the implementation of certain actions in the Gouvernement du Québec's 2020-2021 budget. These amounts will help finance structuring initiatives to significantly improve the management of residual materials in Québec. The following objectives must therefore be achieved by 2023:

- Reduce the quantity of waste eliminated per capita to 525 kg or less.
- Recycle 75% of paper, cardboard, glass, plastic, and metal
- Recycle 60% of organic materials
- Recycle and reclaim 70% of construction, renovation, and demolition waste.

2. Current Site Inventory in Québec¹

Overview of Residual Materials Eliminated in Québec for the Municipal, ICI and CRD Sectors

Elimination Data

Over the past 20 years, Québec has seen a sharp decline in the number of elimination sites on the territory, as shown in Table 1.

Over the past 20 years, Québec has seen a sharp decline in the number of elimination sites on the territory, as shown in Table 1. This situation is largely due to the coming into force of the Regulation respecting the landfilling and incineration of residual materials (CQLR, c. Q-2, r. 19) (hereinafter REIMR) in 2009.

Table 1

NOMBRE DE LIEUX D'ÉLIMINATION																
Types de lieux d'élimination	2000	2002	2004	2006	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

TOTAL	465	428	402	396	315	n/d	82	79	77	79	81	82	82	82	79	78

The implementation of the REIMR also introduced a mandatory reporting process for disposal sites for the various categories of residual materials received annually. As the detailed information in Table 2 indicates, the annual reports submitted by the elimination sites have evolved and become more precise over the years, making it possible to better understand the source of the various residual materials eliminated.

¹ In this section, rounding may not add up to the total sum shown at the bottom of the tables.

*The total amount of residual materials eliminated (excluding sludge) in 2013 has been revised from that already reported.

Table 3 shows the same quantities of residual materials as Table 2, thus excluding sludge, but indicates the quantities sent to the various elimination sites. Not surprisingly, the overwhelming majority of materials disposed of are sent to landfills, but in recent years there have been many fluctuations in the quantities disposed of in construction or demolition waste landfills.

TOTAL	6 882 000	6 496 000	6 454 000	6 717 000	6 219 000	5 637 000	5 469 000	5 430 000	5 328 000	5335000*	5 240 000	5 140 000	5 004 000	5 417 000	5 361 000	5 588 000

*The quantities of residual materials disposed of (excluding sludge) in the sanitary landfills (SL)/engineered landfills (EL) and in total in 2013 have been revised from those already reported.

In addition to solid waste, elimination sites also receive sludge, nearly two-thirds of which was incinerated in 2019 in one of the three sludge incinerators in Montreal, Québec City and Longueuil. Table 4 shows the quantities of sludge eliminated since 2000. Since 2008, the sludge eliminated is now measured on a wet basis.

Table 4

QUANTITÉ DE BOUES ÉLIMINÉES

(EN TONNES EN BASE HUMIDE sauf pour 2000-2006 - base sèche)

	2000	2002	2004	2006	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Boues incinérées	82 000	94 000	84 000	76 000	384 000	332 000	324 000	344 000	330 000	341 000	348 000	323 000	297 000	328 000	338 000	325 000
Boues enfouies	66 000	101 000	114 000	55 000	172 000	137 000	162 000	123 000	118 000	132 000	142 000	160 000	142 000	142 000	123 000	211 000
Autres boues enfouies (agroalimentaires, industrielles, etc.)	0	0	0	0	0	0	19 000	10 000	16 000	20 000	5 000	5 000	7 000	7 000	26 000	15 000
TOTAL	0	0	0	0	557 000	519 000	505 000	476 000	464 000	492 000	495 000	487 000	446 000	477 000	487 000	551 000

Among all these data, the main indicator and objective remains the decrease in the quantities of materials eliminated per capita. The 2011-2015 Action Plan of the Québec Residual Materials Management Policy planned to reduce the quantity of residual materials eliminated to 700 kilograms per capita, while the 2019-2024 Action Plan set a new objective for 2023 to reduce it to 525 kilograms or less per capita. As shown in Table 5, the amount eliminated per capita was in relative decline since 2013, but a significant increase in the amount eliminated per capita is observed for the year 2019. At this point, it remains difficult in the current context to predict how this measure will evolve over the next few years.

The year 2008 presents two different data, as a result of the methodological change in the calculation of the sludge eliminated described above (calculation now done on a wet basis). As for the revisions to the quantities disposed of per capita since 2009, they result from a methodological change in the source used for the total Québec population.

**Per capita quantities of residual materials eliminated from 2009 to 2018 have been revised from those already reported, as well as the total quantity eliminated in 2013.*

Recovery and Other Uses

In addition to the materials received for elimination, the various sites, but especially the engineered landfills, receive significant quantities of materials that are used to cover materials that are buried or for other uses, such as the construction of access roads. As shown in Table 6, the total quantities received for these purposes have increased significantly in recent years. Low contamination soils are the most widely used material, but in recent years, other materials have been increasingly used, such as CRD and fine CRD tailings, but also other materials such as glass from curbside recycling, various types of ash and street sweepings (as indicated in the Other category in Table 6).

TOTAL buried	5,871,000	5,417,000	5,251,000	5,209,000	5,105,000	5,112,000	5,033,000	4,952,000	4,802,000	5,206,000	5,146,000	5,364,000

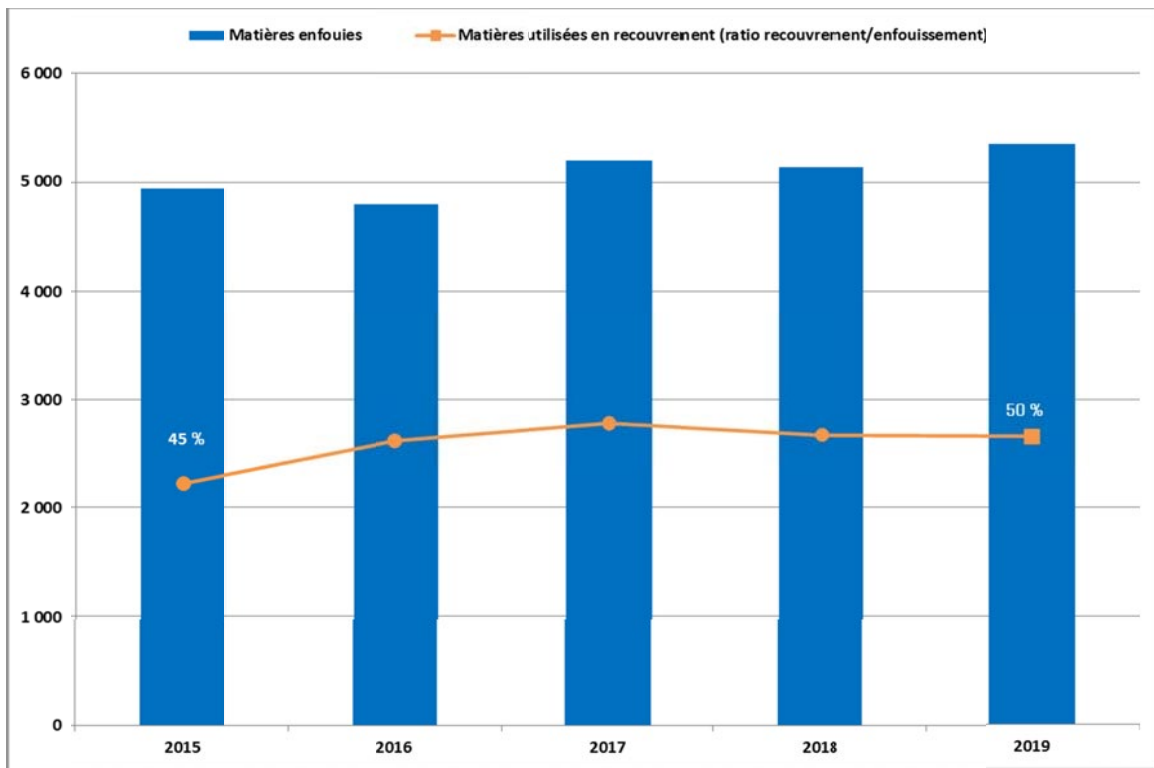

**The quantities of certain categories of residual materials used for recovery in 2018 have been revised from those already reported.*

It is therefore clear that, in proportion to the quantities of materials buried, the quantities of materials used for capping or other purposes have increased sharply, as illustrated by the following table.

The capping-to-burial ratio in Figure 1 shows that for the past few years, this ratio is about 50%, which means that for every tonne of waste material buried, more than 500 kg of residual materials are used for capping or other purposes.

Figure 1

Quantity of material sent to the various landfills and proportion of material used for capping (in thousands of tonnes)

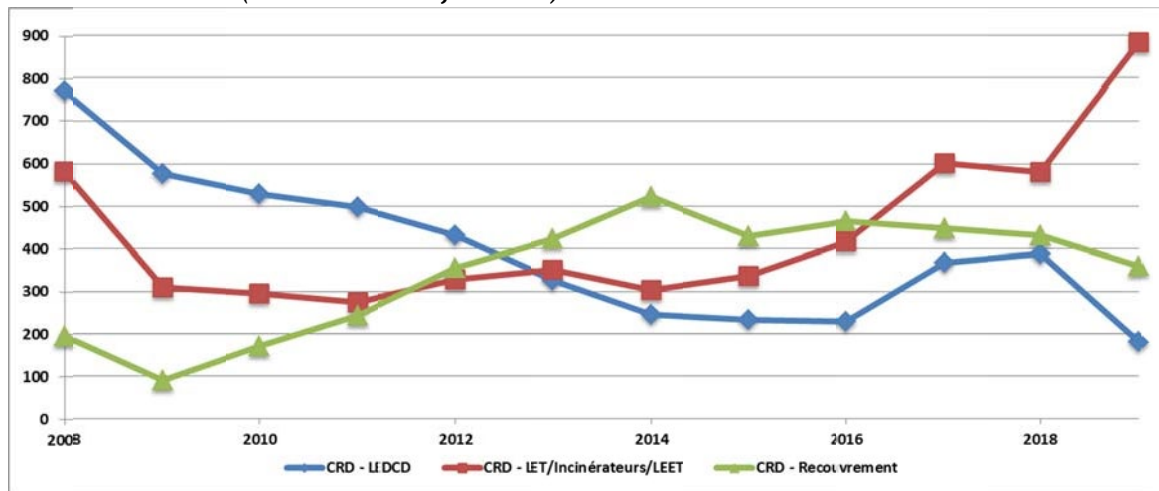

Of all the materials that are sent to disposal sites, whether for landfilling, capping or other uses, one category of material is becoming increasingly important. These are CRD residues. Figure 2 illustrates the evolution of CRD waste received at disposal sites by destination and facility type, but also their use as material for capping or other uses. We note that after a significant drop in 2009, caused in particular by the economic slowdown but also by the coming into force of the REIMR, the total quantities have gradually increased over the years to reach in 2019 an amount that is increasingly close to that observed in 2008.

The use and destination of these CRD residues also fluctuated during this period.

Figure 2

Quantity of CRD residues used for capping or other purposes and disposed of at various locations (in thousands of tonnes)

Quantities of residual materials eliminated by RCM, equivalent territory, and metropolitan community since 2015

The quantities of residual materials eliminated by RCM, equivalent territory, and metropolitan community for the years 2015 to 2018 are presented in Appendix 1.

These data are derived from the annual records and reports required by disposal sites under the Regulation Respecting the Landfilling and Incineration of Residual Materials, forwarded to the MELCC which compiles it. The data is presented according to the major sectors of activity, i.e., the residential sector (household waste), the ICI sector and the construction, renovation, and demolition (CR) sector. The data does not consider sludge nor waste from ecocentres, composting and sorting.

Composition of Eliminated Materials

The data in the preceding tables and figures provide information on the source of the materials sent for elimination, by industry sector, but also on the types of facilities to which they were sent. Note that materials from municipalities, industrial, commercial, and institutional (ICI) and CRD sectors represent more than 85% of the total quantities eliminated, and in this context, it is important to better understand the composition of these materials. Table 7 presents the overall results of two characterization studies conducted by RECYC-QUÉBEC at the entrance of elimination sites in 2011-2012 and 2019-2020.

Table 7

Composition of materials disposed of in 2011 and 2019 from the municipal, ICI and CRD sectors

Material categories	2011	2019-2020		Evolution		2011-2019
	Tonnage	%	Tonnage	%	%	Tonnage
Paper and cardboard	542,000	10.4%	545,000	11.3%	0.6%	3,000
Glass	85,000	1.6%	76,000	1.6%	-10.6%	(9,000)
Metal	168,000	3.2%	142,000	2.9%	-15.5%	(26,000)
Plastic	547,000	10.5%	458,000	9.5%	-16.3%	(89,000)
Paper, cardboard, plastic, glass, metal	1,343,000	25.8%	1,221,000	25.2%	-9.1%	(121,000)
Organic materials	2,249,000	43.3%	1,455,000	30.1%	-35.3%	(794,000)
Bulky items	89,000	1.7%	212,000	4.4%	138.2%	123,000
CRD residues	1,122,000	21.6%	1,367,000	28.3%	21.8%	245,000
Textiles	161,000	3.1%	287,000	5.9%	78.3%	126,000
HHW	26,000	0.5%	60,000	1.2%	130.8%	34,000
Other	205,000	3.9%	236,000	4.9%	15.1%	31,000
TOTAL	5,194,000		4,839,000		-6.8%	(355,000)

It is quickly becoming apparent that certain categories of materials will be included in lower proportions in the quantities eliminated in 2019 than in 2011, notably organic and recyclable materials (paper, cardboard, glass, plastic, and metal). The expansion in recent years of curbside and organics collection services, particularly in the municipal sector for organic materials, has undoubtedly contributed to these results.

On the other hand, the proportions of CRD, bulky items, textiles, and household hazardous waste (HHW) are increasing in the quantities eliminated in 2019 compared to 2011.

More detailed results, particularly for the 2019-2020 characterization study, will be published shortly.

3. Assessment of Residual Materials Management until 2018

For more than 20 years, RECYC-QUÉBEC has been drawing up the Assessment of residual materials management in order to monitor the evolution of the quantities of residual materials generated, eliminated, recovered, and reclaimed on the Québec territory. Year after year, the description provided by RECYC-QUÉBEC allows us to evaluate Québec's performance in residual materials management and to contribute to the reflection on the measures to be implemented, in order to support the various sectors in learning about their greatest challenges and to ensure continuous improvement. The Assessment is also used to measure the achievement of the objectives set out in the action plans resulting from the Québec Residual Materials Management Policy.

The most recent data is from 2018 and includes information from all recovery systems, including elimination data.

Quantities of Residual Materials Recovered by Certain Sectors for Québec 2012

a) Curbside Recycling

Quantities of recyclable materials received by origin at curbside recycling sorting facilities between 2012 and 2018

b) EPR

Quantities of materials subject to EPR recovered between 2012 and 2018

- 2012: Recovery of 67,000 tonnes in 2012 (used oils and paint)
- 2015: Recovery of more than 95,000 tons of materials in 2015, all products combined. These results reflect a 6% growth in the quantities recovered in 2013.
- 2018: In 2018, all group and individual programs have resulted in the recovery of more than 97,000 tonnes of materials, all products combined. This is a 2% increase in the quantities recovered compared to 2015.

Change in the recovery rate of organic materials for recycling by sector between 2012 and 2018

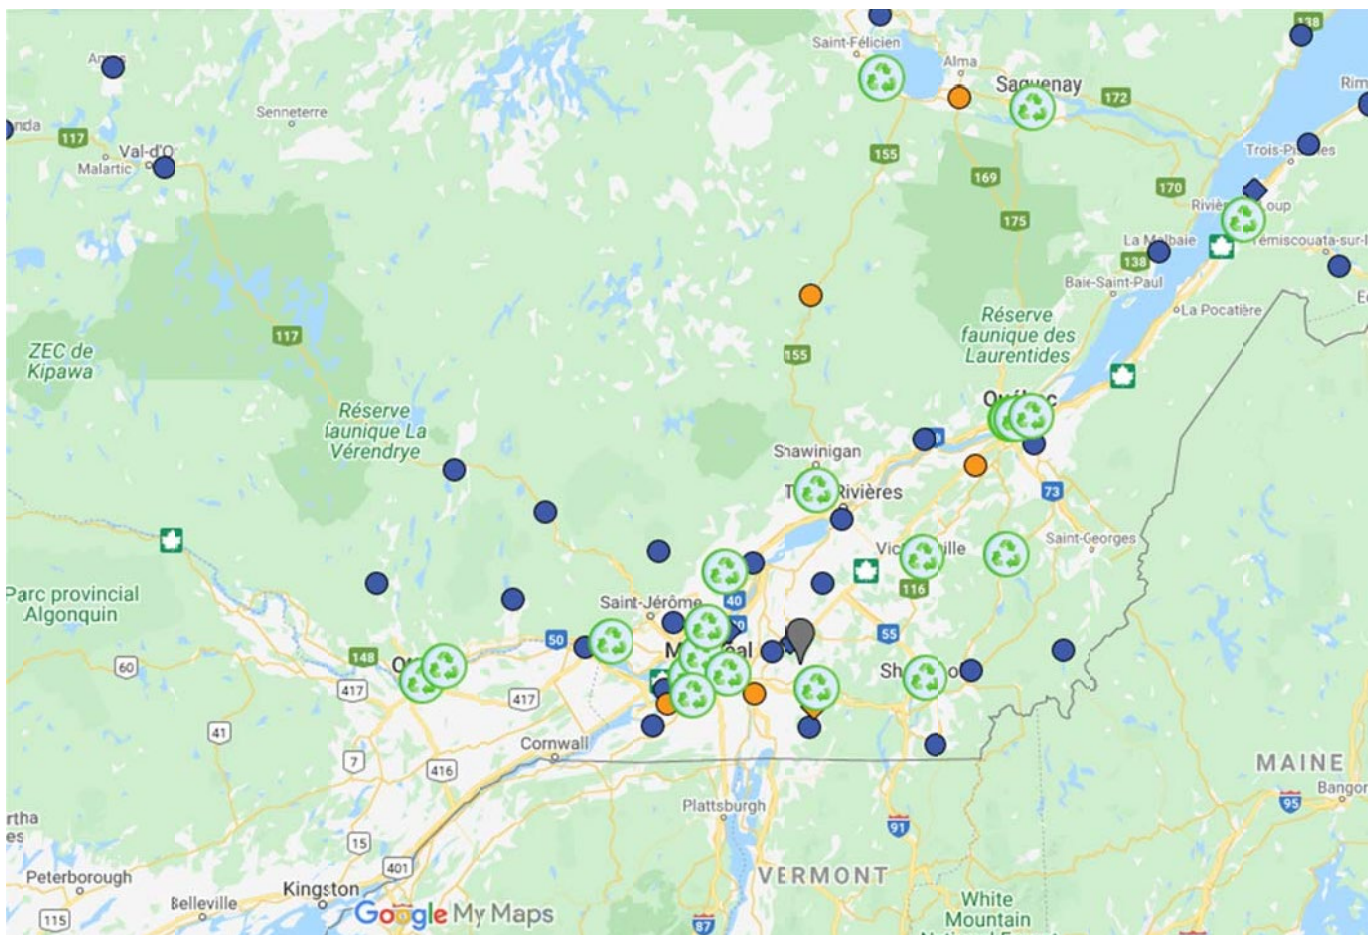

sector of activity	2012	2015	2018
Green and municipal food waste	16%	17%	31%
Municipal sludge	35%	51%	42%
Municipal subtotal	22%	29%	35%
Sludge and residues from paper mills	39%	34%	34%
Other residues ICI	2%	3%	5%
Subtotal ICI	22%	19%	19%
Total (without agri-food residues)	22%	25%	27%

Location of sorting centers for recyclable materials and processing sites for organic materials

There are 27 sorting centres for recyclable materials from curbside recycling in Québec. A list of these recycling sorting centres by region is presented in Appendix 3. As for organic material processing sites, there are 43 composting sites that accept various types of organic materials and three biomethanization sites that process food residues. As of the date of this report, there are 16 organic site projects in the planning or implementation stage in various regions, including 11 composting projects and five biomethanization projects. The following map shows the list of organic materials processing sites in operation and the current projects by region.

Figure 3

Location of sorting centres and organic material processing sites

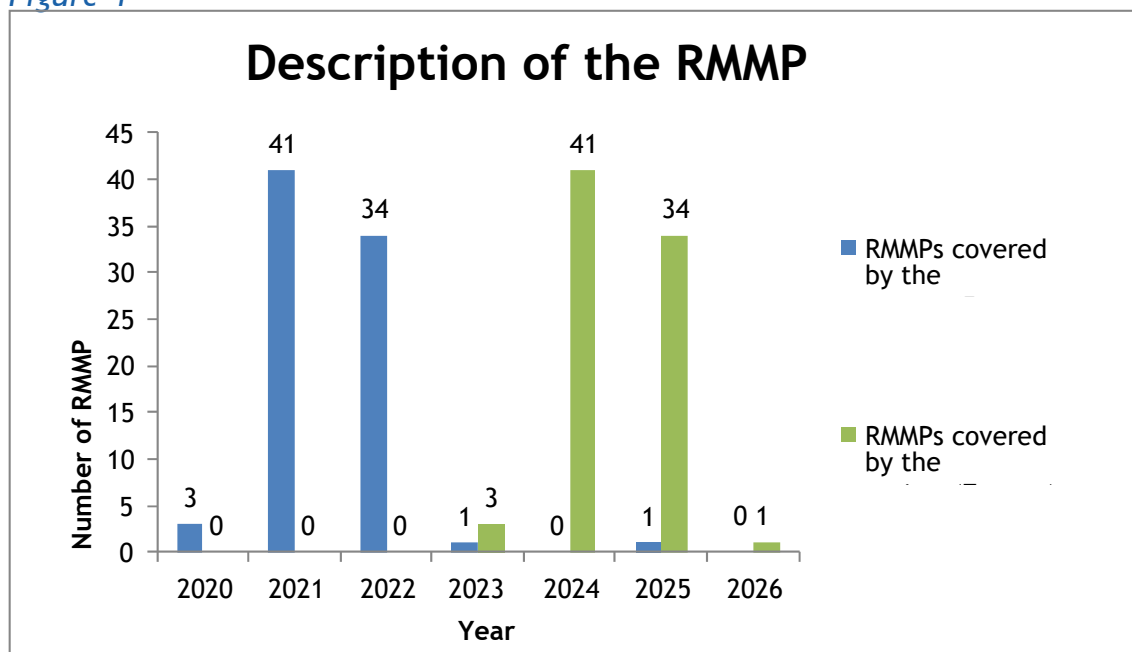

The online map can be viewed at the following address: <https://www.google.com/maps/@46.7223569,143.77116,2c/data=!3m1!1e3!3m2!1s1j1lgPKiQLSq3lfoLk0s8X-x0niWhZGfk&ll=46.722356914377116%2C-75.48641371874997&z=7>.

Residual Materials Management Plans, Areas Covered by the Plans and Rights of Supervision

As of the date of this report, there are 81 Residual Materials Management Plans (RMMPs) in effect capping all of Québec (see Appendix 4). Starting in 2021 and until 2025, regional county municipalities (RCMs) and metropolitan communities will be called upon to revise their RMMPs, the majority of which will be revised in 2021 and 2022.

Figure 4

As part of the process of developing and reviewing Residual Materials Management Plans (RMMPs), it is possible to prohibit or limit the disposal on the territory of residual materials coming from outside the territory of application of the plan. This mechanism, also called “right of inspection,” allows a regional municipality² to control the quantity of waste disposed of within the territory of its RMMP, due to the anticipated impacts.

As of the date of this report, ten (10) RCMs that have an engineered landfill site on their territory have indicated a right of supervision in their current RMMP, two (2) of which are prohibitions and eight (8) are tonnage limits. On the other hand, only five (5) RCMs reported having adopted an implementing by-law related to the prohibition or limit.

Information on the rights of supervision provided for in the current RMMPs, for RCMs with an engineered landfill site on their territory and for RCMs without one, can be found in Appendix 5.

² Regional county municipalities (RCMs), metropolitan communities and several cities not included in an RCM are recognized as regional municipalities within the meaning of the EQA. See article 53.5 2nd paragraph of the EQA.

4. Overview of Habits and Behaviours of Citizens and ICI in the Management of their Residual Materials

Citizens, as well as industrial, commercial, and institutional (ICI) organizations, are the cornerstone of Québec's performance in the prevention and management of residual materials (MRM). In 2015, RECYC-QUÉBEC conducted a study among Québec households to learn about their behaviours, attitudes, and beliefs regarding the 4Rs (reduction at source, reuse, recycling, and reclamation). Then, a study on the state of progress of the behaviours of industrial, commercial, and institutional (ICI) sectors was carried out in 2016. Here are the results of these studies. New data to compare the evolution of citizen behaviours over the last five years will be available in the spring of 2021.

Behaviours and attitudes towards recyclable materials: accessibility of services

The availability of municipal curbside recycling services is a clear incentive for citizen participation. Curbside pick-up of recyclable materials (paper, cardboard, plastic, glass, metal) is well established in all regions of Québec; almost all households (99 %) benefit from this municipal service. Quebecers have strongly assimilated the recovery habits of these materials: 70% say they participate systematically and 27% say they participate a lot. As for other municipal services, 65% of the households surveyed said they have access to green waste collection and 27% said they have access to food waste collection for composting.

Recovery of recyclable materials from curbside recycling

The vast majority of respondents (92%) consider that it is very or somewhat easy to recover recyclable materials in the home. More than half (56%) put some materials in the recycling bin even when they are not sure that it is the right recovery route. However, a minority of respondents still experience some difficulties. They admit to being discouraged by certain inconveniences of recovery, such as the cleaning of objects or materials (27%), the space occupied inside (18%), confidential documents (28%) and lack of knowledge about what materials go or do not go in the recycling bin (21%). Some citizens also remain skeptical. 37% of respondents believe that materials that go to the recycling bin are not necessarily recycled. Finally, 16% consider recycling to be an activity that generates pollution and wastes energy.

Routing of materials destined for eco-centres and authorized drop-off points

74% of respondents always, or most of the time, go to authorized drop-off points or eco-centres to dispose of their products.

Motivations behind responsible behaviour

The habit of recycling is highly valued by citizen respondents: 88% believe that those who recover can be very proud of it. Similarly, 75% are disappointed that others do not make the effort. Eco-responsible considerations motivate their participation in recycling. These respondents want to leave a healthy environment for future generations, prevent the waste of resources, reduce the amount of waste sent to elimination sites, give materials a second life and contribute to the reduction of greenhouse gases.

Food Waste Recovery

When they have access to municipal collection, 67% of respondents participate in the recovery of food waste. Of these, 29% say they do it systematically and 23% say they do it a lot. For those who do not have access, 62% think it would be important for their municipality to offer this service. The recovery of organic materials (municipal collection, home, and community composting) was mentioned by 36% of citizens who responded to varying degrees. Of these, 12% always recycle; 14% recycle a lot (but not all); 5% occasionally; and another 5% rarely. How do respondents perceive this type of recovery? Opinions differ significantly, with 42% saying that it is very or somewhat easy to recover food waste at home, while 46% find it somewhat (29%) or very (17%) demanding.

Green Waste Recovery

Of the households surveyed, 65% said they have access to a municipal green waste collection service (71% among those with a garden). Nearly half (44%) of the households surveyed manage these materials on site. Hence, 24 per cent of them support grasscycling and leafcycling and leave it in the field, while 20 per cent use the green waste for composting. Only 15% of homeowner respondents dispose of their green waste in the garbage.

Status of ICI Behaviours

The ICI behavioural survey reports that 91% of respondents have access to a recycling collection service. Those who do not yet have access feel it is important for their municipality (78%) or their landlord (74%) to provide such a service. For organic materials collection, 22% of respondents have access to the service offered by their municipality (63%) or by a private company (32%). This type of collection is most common among retail businesses and businesses with 20 to 49 employees.

Recovery of Recyclable Materials

More than eight in ten establishments (83%) report having access to authorized drop-off locations or special collections for items, materials or products that are not accepted in the recycling bin. In the case of construction, renovation, and demolition (CRD) waste, 70% report having access to specific drop-off points. Most of the ICIs surveyed (81%) consider that they make their contribution in terms of RMM. Almost half of them, 41%, feel they need to do more to improve their performance.

Waste management issues are significant among ICIs. Of those surveyed, 84% consider it urgent for companies to reduce their environmental footprint and greenhouse gas production. 79% of them are also severe and critical of their peers who do not recover. Moreover, 54% believe that there are financial gains in fully managing residual materials. The majority (84%) of responding establishments participate systematically in the recovery of recyclable materials (paper, cardboard, plastic, glass, and metal). They also claim to take the materials not accepted into the bin to an authorized drop-off point.

Adherence to Environmental Recognition or Certification

15% of the responding institutions are or have already enrolled in an environmental recognition or certification program. Of these, 39% have received certification from RECYC-QUÉBEC's ICI ON RECYCLE! program. This participation is more prevalent among industrial and retail businesses, establishments with 20 or more employees and in resource regions. The establishment of a policy or specific guidelines in RMM is becoming an increasingly common practice. Of the establishments that responded, 58% said they had one in place. In addition, 14% of ICIs are seeking to distinguish themselves or set themselves as a reference in RMM in their sector. 27% said they had only begun to think about this issue.

Appendix 1: Quantity of RMs disposed of per RCM/Indigenous territory by sector since 2015 (including the quantity of materials eliminated inside and outside each RCM/Indigenous territory)

Appendix 3: List of Recycling Sorting Centres by Region

Administrative Region	Name of Sorting Centre	Municipality	Supply Source
01 Bas-Saint-Laurent	Bouffard sorting centre	Mont-Joli	Municipal and ICI
01 Bas-Saint-Laurent	Récupération des Basques	Trois-Pistoles	Municipal and ICI
01 Bas-Saint-Laurent	Société VIA - Rivière-du-Loup	Rivière-du-Loup	Municipal and ICI
02 Saguenay - Lac-Saint-Jean	Régie des matières résiduelles du Lac St-Jean sorting centre	Roberval	Municipal and ICI
02 Saguenay - Lac-Saint-Jean	Saguenay sorting centre	Saguenay	Municipal and ICI
03 Capitale-Nationale	Services Matrec - Québec	Québec	ICI
03 Capitale-Nationale	Québec City sorting centre	Québec	Municipal and ICI
04 Mauricie	Récupération Mauricie	Saint-Étienne-des-Grès	Municipal and ICI
05 Estrie	Récup Estrie	Sherbrooke	Municipal and ICI
06 Montréal	Cascades Recovery	Montréal	ICI
06 Montréal	Montreal recycling sorting centre	Montréal	Municipal and ICI
06 Montréal	Recycling sorting and recovery centre of the Saint-Michel Environmental Complex	Montréal	Municipal and ICI
06 Montréal	Récupération Enviro Connexions	Lasalle	ICI
07 Outaouais	Tricentris sorting centre - Gatineau	Gatineau	Municipal and ICI
09 Côte-Nord	Ressource de réinsertion Le Phare	Port-Cartier	Municipal and ICI
11 Gaspésie - Îles-de-la-Madeleine	Régie des matières résiduelles de la Gaspésie sorting centre	Grande-Rivière	Municipal and ICI
12 Chaudière-Appalaches	Récupération Frontenac	Thetford Mines	Municipal and ICI
12 Chaudière-Appalaches	Société VIA - Lévis	Lévis	Municipal and ICI
13 Laval	Waste Management sorting centre (WM) of Laval	Laval	ICI
14 Lanaudière	Tricentris sorting centre - Terrebonne	Terrebonne	Municipal and ICI
14 Lanaudière	EBI Environnement Inc.	Joliette	Municipal and ICI
15 Laurentides	Tricentris sorting centre -	Lachute	Municipal and ICI

	Lachute		
16 Montérégie	Services Matrec Inc.	St-Hubert	Municipal and ICI
16 Montérégie	Ricova	Châteauguay	Municipal and ICI
16 Montérégie	Sani-Eco	Granby	Municipal and ICI

Administrative Region	Name of Sorting Centre	Municipality	Supply Source
17 Centre-du-Québec	Gaudreau Environnement Inc.	Victoriaville	Municipal and ICI
17 Centre-du-Québec	Récupération Centre du Québec Inc.	Drummondville	Municipal and ICI

Appendix 4: List of Current RMMPs

See document on following page

Région	RMMP	Effective date of the revised RMMP	Deadline to adopt a revised RMMP (5 years)	Ending date of the RMMP (7 years)	Territory of application of the plan
1	Kamouraska RCM	2017-02-23	2022-02-23	2024-02-23	Kamouraska RCM

Appendix 5: List of Rights of Supervision Under the RMMPs by Region

See documents on the following pages

Rights of supervision provided for in the RMMPs in force by region, for RCMs with an EL (Engineered Landfill) on their territory

Region	RCM	EL location	Territory of application of the RMMP	RMMP in force - right of inspection as of February 2021 (tonnes)
01	Rivière-du-Loup	Cacouna	Rivière-du-Loup RCM	75,000
01	Témiscouata	Degelis	Témiscouata RCM	Forbidden
01	La Matanie	Matane	La Matanie RCM	25,000
01	Rimouski-Neigette	Rimouski	Rimouski-Neigette RCM	none
02	Lac-Saint-Jean-Est	Hebertville	Domaine du Roy RCM, Lac-Saint-Jean-Est RCM, Maria-Chapdelaine RCM and the Montagnais community of Mashteuiatsh	none
03	Charlevoix-Est	Clermont	Charlevoix-Est RCM	none
03	Portneuf	Neuville	Portneuf RCM	35,000
03	The Côte-de-Beaupré	Saint-Joachim	CMQ except for Lévis	none
04	Les Chenaux	Champlain	Les Chenaux RCM, Maskinongé RCM Mékinac RCM City of Shawinigan and City of Trois-Rivières	none
04	Maskinongé	Saint-Étienne-des-Grès	Les Chenaux RCM, Maskinongé RCM Mékinac RCM City of Shawinigan and City of Trois-Rivières	none
05	Le Haut-Saint-François	Bury	Le Haut Saint-François RCM	none
05	Coaticook	Coaticook	Coaticook RCM	none
08	Abitibi	Amos	Abitibi RCM	none
08	Outside RCM	Rouyn-Noranda	City of Rouyn-Noranda	none

Region	RCM	EL location	Territory of application of the RMMP	RMMP in force - right of inspection as of February 2021 (tonnes)
08	La Vallée-de-l'Or	Val d'Or	La Vallée-de-l'Or RCM	Forbidden
09	Manicouagan	Ragueneau	Manicouagan RCM except for the Pessamit Indian Reserve	none
